

COMMUNITY UPDATE

Hello Community Members,

Thanks you for your continued interest in Pottinger Energy Park, we wanted to let you know that EnergyCo has launched consultation on the [South West Renewable Energy Zone \(REZ\) Community and Employment Benefit Program](#), which will invest in projects and programs that deliver legacy outcomes for the region.

We encourage community members, groups and organisations that are interested in the Program and providing feedback to participate in one of the EnergyCo feedback sessions that are being held in person and online during July and August.

COMMUNITY AND EMPLOYMENT BENEFIT PROGRAM

This program will invest in projects and programs that deliver legacy outcomes for the region. It is funded through access fees paid by renewable energy developers connecting to the South West REZ transmission network, including Pottinger Energy Park.

The Minister for Energy recently announced that an initial \$60 million will be invested into communities hosting renewable energy and transmission lines so they can share the benefits of the opportunity.

The funding area was recently expanded to include towns and communities outside the REZ boundary that are also supporting REZ development, ensuring a fairer distribution of benefits.
