

Procurement Update

Hello,

Thank you for your interest in Pottinger Energy Park and for engaging directly to the project team regarding potential business and procurement opportunities.

Pottinger Energy Park is in the final stages of engaging its principal contractors, who will be responsible for engaging subcontractors to deliver the wind farm and battery project. As procurement activities progress, principal contractors will lead engagement with subcontractors and suppliers regarding upcoming work packages and contracting opportunities.

To support businesses in preparing for these opportunities, Pottinger Energy Park will continue to provide updates and supplier information over coming months. In November 2026, we will share further information including:

- Anticipated pre-qualification requirements for contractors and suppliers.
- Guidance and resources to support supplier readiness.

These initiatives are designed to help businesses better understand project requirements and prepare to participate in future procurement activities. Further details regarding pre-qualification requirements, and supplier support activities will be shared in the coming months.

Thank you for your continued interest in Pottinger Energy Park. We look forward to engaging with you as the project progresses.

ABOUT THE PROJECT

Pottinger Energy Park is a large-scale wind and battery energy storage project located in NSW's Western Riverina region, approximately 60 km south of Hay and 75 km north of Deniliquin. Developed by Someva Renewables and AGL Energy, the project is situated within the South West Renewable Energy Zone. Construction is expected to commence in 2027.

Pottinger Energy Park is dedicated to engaging meaningfully with the community at every stage of the project. Explore our community initiatives, read our newsletters and find out what's been happening at our Community Consultative Committee meetings.
